EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Ken Moore on 1/8/2010.

The application has been amended as follows:

In the claims:

Please cancel claims 3, 5, and 12.

Please amend the claims 1, 2, 18, 19 as follows:

1. (Currently Amended) A battery comprising:
an electrode assembly comprising a positive electrode plate, a negative electrode plate and a separator wound or laminated together, core materials of the positive and negative electrode plates being bared at ends of the electrode assembly;
a cylindrical outer case having a bottom connected to an end face of the electrode assembly to serve as a battery terminal;

Art Unit: 1795

electrolyte impregnated in the electrode assembly; and

a lid connected to another end face of the electrode assembly and attached to the outer case ~~with a sealer and an insulator interposed therebetween,~~

wherein the lid includes a cylindrical portion, a connecting part in one piece therewith that engages with and connects to a bottom part of an outer case of another battery to be connected, a hole configured to receive the electrolyte into the battery, and a safety structure that releases gas in response to a build-up of internal pressure,

the lid is fixed to the outer case of the battery by a fixing groove formed on the lid and the outer case at a position where a gasket is interposed between the outer case of the battery and the cylindrical portion of the lid,

and the lid directly contacts and is directly welded to the bared portion of the core material of one of the electrode plates of the electrode assembly.

2. (Currently Amended) A battery comprising:

an electrode assembly comprising a positive electrode plate, a negative electrode plate and a separator wound or laminated together, core materials of the positive and negative electrode plates being bared at ends of the electrode assembly;

a cylindrical outer case having a bottom connected to an end face of the electrode assembly to serve as a battery terminal;

electrolyte impregnated in the electrode assembly; and

a lid connected to another end face of the electrode assembly and attached to the outer case ~~with a sealer and an insulator interposed therebetween,~~

Art Unit: 1795

wherein the lid includes a cylindrical portion, a connecting part in one piece therewith that engages with and connects to a bottom part of an outer case of another battery to be connected, a hole configured to receive the electrolyte into the battery and a safety structure that releases gas in response to an increase in internal pressure,

the lid is fixed to the outer case of the battery by a fixing groove formed on the lid and the outer case at a position where a gasket is interposed between the outer case of the battery and the cylindrical portion of the lid,

and the lid directly contacts and is directly welded to the bared portion of the core material of one of the electrode plates of the electrode assembly to serve as a first current collector plate.

18. (Currently Amended) The battery according to claim 1, wherein the lid comprises [[a]] another cylindrical portion, integrally formed in the lid, which is shaped to receive and connect to a bottom of another battery.

19. (Currently Amended) The battery according to claim 2, wherein the lid comprises [[a]] another cylindrical portion, integrally formed in the lid, which is shaped to receive and connect to a bottom of another battery.

EXAMINER'S REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Prior art does not disclose nor suggest

Art Unit: 1795

“wherein the lid includes a cylindrical portion, a connecting part in one piece therewith that engages with and connects to a bottom part of an outer case of another battery to be connected, a hole configured to receive the electrolyte into the battery, and a safety structure that releases gas in response to a build-up of internal pressure,

the lid is fixed to the outer case of the battery by a fixing groove formed on the lid and the outer case at a position where a gasket is interposed between the outer case of the battery and the cylindrical portion of the lid“

as claimed in claims 1 and 2.

PERTINENT ART

It is noted that Hara (US 4804593) discloses

“the lid directly contacts and is directly welded to the bared portion of the core material of one of the electrode plates of the electrode assembly to serve as a first current collector plate” as shown in fig. 3 wherein the anode 7 directly contacts the lid 2.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CYNTHIA LEE whose telephone number is (571)272-8699. The examiner can normally be reached on Monday-Friday 8:30am-5pm.
